

# Information on Agile Showcases

07/02/23

For the showcases we will want to see you pitch your project idea starting with epics and detailing some stories. As per the guidance in the ACW spec (included below). We will also want to see evidence of your use of the Agile techniques covered in the lectures. We would expect the presentation (you can use power point to structure this) to be around 5 minutes. We will be doing this in the Lab unless there is further information on canvas.

We would expect the end of the discovery phase to have the elements highlighted below. You may have more evidence, so feel free to show what you are doing and how you are controlling the project.

Please also create a folder on your TEAMS File system for the Discovery showcase and its evidence. This will start to build the Appendices for your portfolio submission. Take screen shots of your Project Boards to capture them at this point in time. You can then create a folder for the next phase and start to put evidence there.

## From ACW spec:

At each checkpoint you will need to produce and show the following as a project snapshot  
NB: some of these may not be present in early snapshots - depending on the rate of delivery of the module content.

Presentation of visual project board(s)

Please include prioritised and estimated stories, epics and themes. Stories should have appropriate acceptance criteria.

Product Backlog

Definition of done for story elements / features

- o any user-research

- o any prototypes (Digital / Paper) produced.

Current metrics, burn, velocity

Physical evidence of:

- o SCRUM meetings (Standups, retrospectives, planning)
- o any test-driven design

Describe and evaluate development work including pair programming activity, code reviews and lifecycle management techniques.
